AI-Powered Courseware for Higher Education

[Date]

Lisa Cardoza

President

American River College

4700 College Oak Dr

Sacramento, CA 95841

Dear President Cardoza,

I hope this letter finds you well. My name is [Your Name], and I am a Senior Business Development Writer at Zhi Systems, a company dedicated to transforming educational experiences through cutting-edge AI courseware. I am reaching out to discuss an opportunity that could significantly impact student retention and success at American River College (ARC), where you are leading efforts to enhance educational outcomes for your 28,000 students.

As you are acutely aware, ARC faces a challenging dropout rate of 62.0%, which not only affects student lives but also represents a lost investment in human potential and institutional resources. In light of this, I propose the integration of Zhi Systems' advanced AI courseware to replace traditional methods in key courses that are critical to student success but are currently struggling.

We recommend transitioning the following courses to AI-driven versions:

1. Remedial Math — Mathematics
2. Composition I — English
3. Intro to Psychology — Psychology
4. Ethics — Philosophy
5. Critical Thinking — Philosophy

6. Accounting Principles I — Accounting

7. Statistics — Mathematics

8. Introduction to Human Services — Human Services

These courses serve as foundational pillars for many students, particularly those who may be facing barriers to success. By employing our AI courseware, which features adaptive pacing, embedded diagnostics, built-in tutoring, and job-readiness benchmarking, ARC can provide a personalized learning experience that addresses individual student needs, ultimately improving retention rates.

To illustrate the financial implications of this transition, let's examine the current costs associated with course delivery at ARC. The annual cost of delivering the identified courses is approximately \$466,000. By implementing Zhi Systems' AI courseware, the initial installation cost would be \$425,000, with an annual license fee of \$90,000. This results in a first-year total expenditure of \$5,288,462, compared to the total cost of \$8,461,380 without AI. This represents a substantial first-year savings of \$3,172,918, with recurring annual savings of \$3,597,918 in subsequent years.

The features of our AI courseware align closely with your institutional goals of enhancing educational quality and student engagement. The adaptive pacing allows students to learn at their own speed, reducing frustration and dropout risk. Embedded diagnostics help identify at-risk students early, enabling timely interventions. Built-in tutoring ensures that students receive the support they need, while job-readiness benchmarking prepares them for successful careers post-graduation.

The potential impact of these changes is significant. By investing in AI courseware, ARC can not only improve its financial health but also foster an environment where students feel supported and equipped to succeed. This is a crucial step toward lowering your dropout rate and ensuring that more students are able to achieve their academic goals.

To move forward, I propose we schedule a meeting to discuss this opportunity in further detail. We can explore how Zhi Systems can customize our AI courseware to fit the unique needs of ARC and its students. Please let me know your availability for a brief call or an in-person meeting at your earliest convenience.

Thank you for considering this transformative opportunity for American River College. I look forward to the possibility of working together to enhance the educational experience for your students.

Warm regards,

[Your Name]
